Art Unit: 1723

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a filter element, classified in class 210, subclass 491.
- II. Claims 15-19, drawn to a method of filtering a fluid, classified in class 210, subclass 767.

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus could be used in a materially different process, for example, in a process for filtering a fluid wherein the finest filtration layer is located on the upstream side of the filter. In addition, the method could be carried out by another and materially different apparatus, for example, a planar filter including media layers that are not physically joined to one another.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

The following election of species applies in the case that group I, the filter element is elected:

1) Layers of filter media joined by surface pressure during folding recited in claim 12;

2) Layers of filter media that are ultrasonically bonded to one another recited in claim 13;

3) Layers of filter media joined together by a hot melt adhesive bonding or spray adhesive bonding recited in claim 14.

The following election of species applies in the case that group II, the method is elected:

1) Method of filtering intake air for an internal combustion engine recited in claims 16 and 17;

2) Method of filtering lubricating oils recited in claims 18 and 19;

3) Method of filtering hydraulic oils recited in claims 18 and 19;

4) Method of filtering liquid fuels recited in claims 18 and 19.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-11 and 15 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew O Savage whose telephone number is 703-308-3854. The examiner can normally be reached on Monday-Friday, 7:00am-3:30pm.
